por or .vob files are not supported. It uses a modified version of Windows Explorer that does not support the "extract file path" feature. I use a free tool called UNDF Extractor that supports extracting almost any type of files that Fast Picture Viewer supports. There is no demo available for Fast Picture Viewer 2.0. This study compared the effects of several non-noxious thermal stimuli on body temperature. In a double-blind, controlled trial, normal subjects were exposed in a random order to a non-

noxious radiant heat source maintained at three different temperatures: (1) 23 degrees C, (2) 25 degrees C, and (3) 28 degrees C. Each of the three sources was placed in a custom-built plastic water-filled vapor chamber (WFVC) or in a conditioned paper towel (CPT). In this environment, with the subject blindfolded, the chamber induced an increase in body temperature of only 0.1 degrees C. With the subject aware, the same conditions produced an increase of 0.6 degrees C. In comparison, the CPT induced an increase of 1.7 degrees C. When subjects placed themselves in the WFVC without receiving a prior cue, the chamber induced a decrease in body temperature of 2.4 degrees C, while the CPT induced a decrease of 2.1 degrees C. The mean rate of recovery from thermal stress, measured by the time taken for a 1.5 degrees C temperature decrease, was about five times faster in the CPT than in the WFVC (15.6 vs. 2.4 min). Experimental and theoretical studies of the excited electronic states of In^{3+} in ZnSe. In this paper we report the experimental investigation of the electronic structure and optical properties of ZnSe, containing single ions of In^{3+} impurities. For this, single crystals of ZnSe were doped with a controlled amount of In^{3+} . Emission 82157476af
